

## Project Report

**Student Name:** Anjali

**UID:**24MCA20172

**Branch:** MCA

**Section/Group:** 3(B)

**Semester:**1<sup>st</sup>

**Date of Performance:** 21/11/24

**Subject Name:** Linux administration

**Subject Code:** 24CAP-607

### **Aim: File Management System**

#### **1.Introduction**

In the digital age, effective file management is crucial for both individual users and organizations. The ability to organize, access, and manipulate files efficiently is foundational to productivity and workflow. The File Management System is designed to address these needs by providing a straightforward command-line interface for performing essential file operations within a Linux environment.

#### **1.1Importance of File Management**

File management encompasses a variety of tasks, including organizing files into directories, creating and deleting files, and managing file permissions. These tasks are essential for maintaining an orderly file system, which can improve collaboration, data retrieval, and overall efficiency. In environments where large amounts of data are handled, a robust file management system helps prevent data loss and ensures that users can quickly locate the files they need.

#### **1.2Goals of the Project**

The primary goals of the File Management System are:

1. User-Friendly Interface: To provide a simple, menu-driven interface that allows users to easily select and perform file operations.
2. Comprehensive File Operations: To implement core functionalities such as creating, deleting, listing, and viewing files.
3. Educational Resource: To serve as a practical resource for users to learn about Linux commands and file management concepts.

## 2.Objectives

1. **User-Friendly Interface:** Intuitive command-line interface for easy use.
2. **Core File Operations:** Essential functions: create, delete, list, and view files.
3. **Educational Resource:** Tool for learning Linux command-line basics.
4. **Error Handling:** Clear feedback for improved user understanding.
5. **Future Expandability:** Design for future enhancements and adaptability.
6. **Documentation:** Comprehensive guides for users and developers.
7. **Performance:** Ensure efficient and reliable system operations.

## 3.Implementation

### 1.Directory Setup

The first step is to create a dedicated directory for the file management system.

```
mkdir ~/simple_file_management
```

```
cd ~/simple_file_management
```

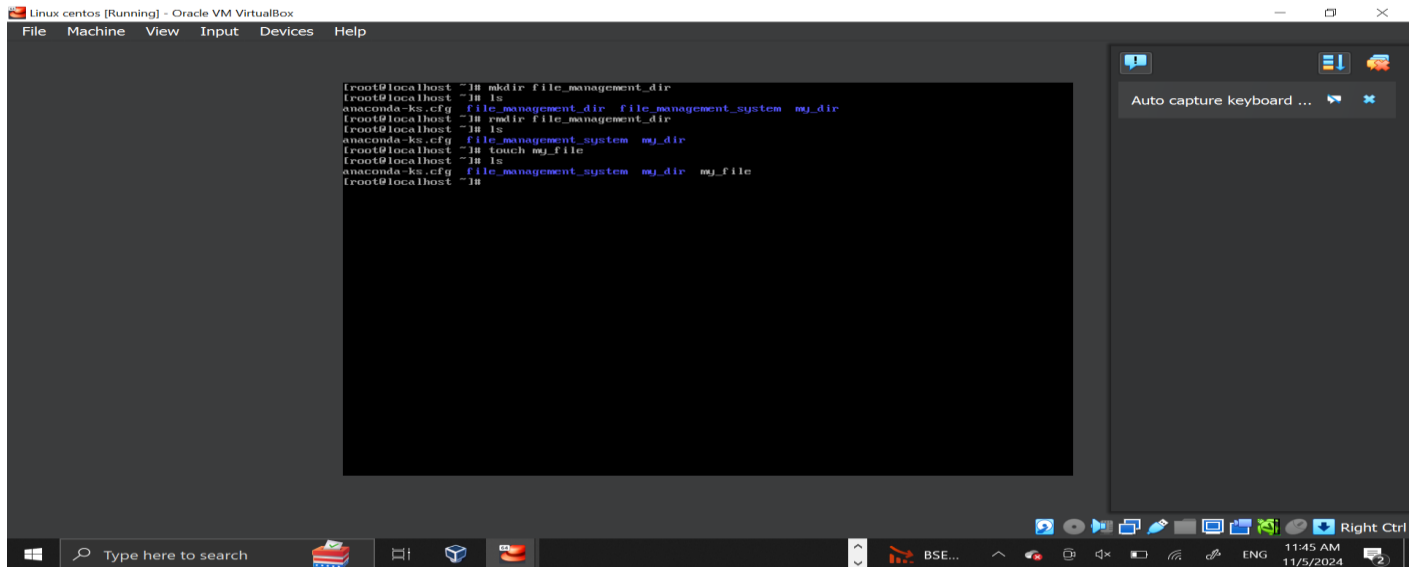

### 2.File Operations

Below are the commands that can be executed directly in the terminal to perform file operations.

### 3.Create a File

To create a new file: touch example.txt

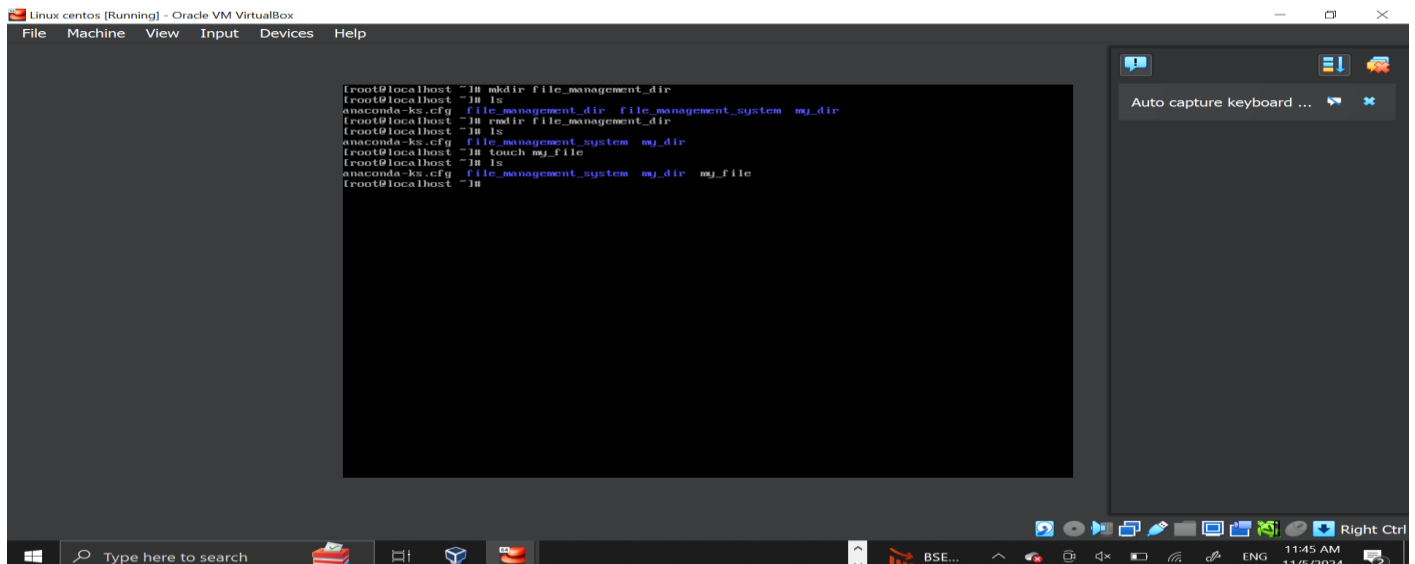

```
Linux centos [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help

[root@localhost ~]# mkdir file_management_dir
[root@localhost ~]# ls
anaconda-ks.cfg  file_management_dir  file_management_system  mj_dir
[root@localhost ~]# mkdir file_management_dir
[root@localhost ~]# ls
anaconda-ks.cfg  file_management_dir  file_management_system  mj_dir
[root@localhost ~]# touch mj_file
[root@localhost ~]# ls
anaconda-ks.cfg  file_management_dir  file_management_system  mj_dir  mj_file
[root@localhost ~]#
```

### 4.List Files

To list files in the current directory: ls -l

```
Linux centos [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help

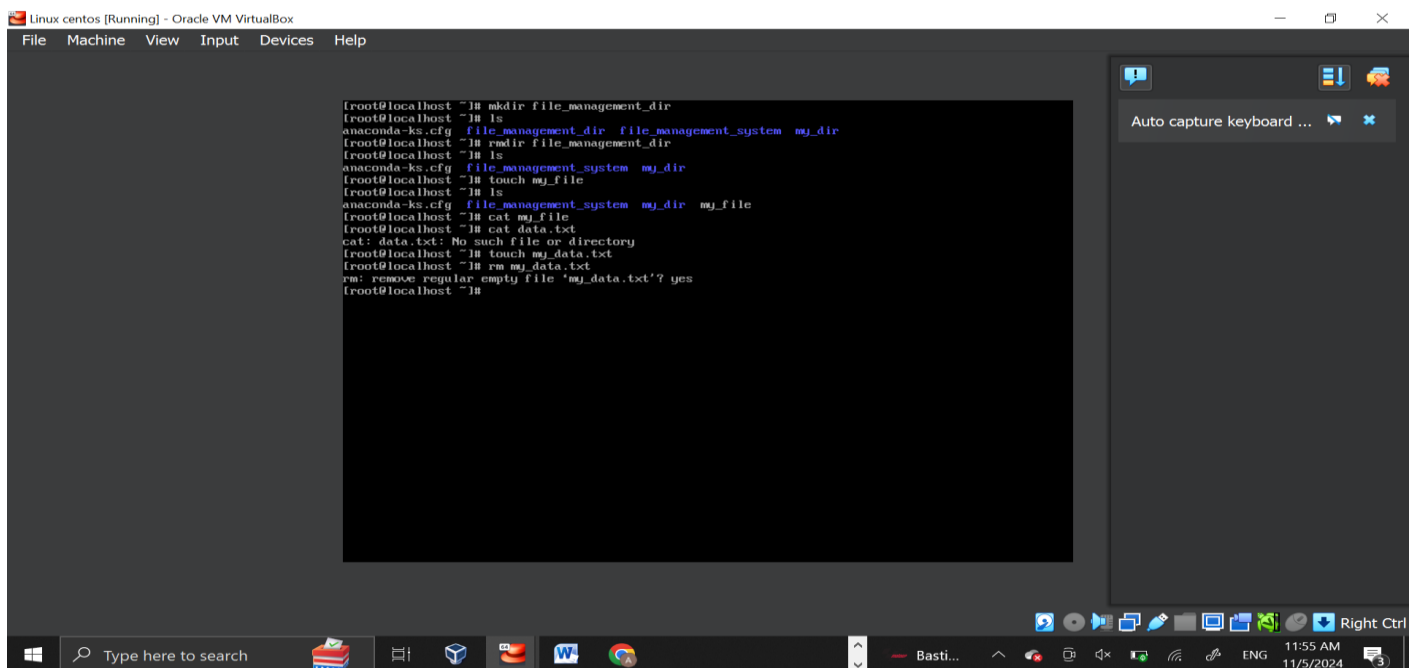

[root@localhost ~]# mkdir file_management_dir
[root@localhost ~]# ls
anaconda-ks.cfg  file_management_dir  file_management_system  mj_dir
[root@localhost ~]# mkdir file_management_dir
[root@localhost ~]# ls
anaconda-ks.cfg  file_management_dir  file_management_system  mj_dir
[root@localhost ~]# touch mj_file
[root@localhost ~]# ls
anaconda-ks.cfg  file_management_dir  file_management_system  mj_dir  mj_file
[root@localhost ~]#
```

## 5.View File Content

To view the content of a file: cat example.txt

## 6.To delete the file

To delete a specific file: rm example.txt

```
[root@localhost ~]# mkdir file_management_dir
[root@localhost ~]# ls
anaconda-ks.cfg  file_management_dir  file_management_system  mj_dir
[root@localhost ~]# rmdir file_management_dir
[root@localhost ~]# ls
anaconda-ks.cfg  file_management_system  mj_dir
[root@localhost ~]# touch mj_file
[root@localhost ~]# ls
anaconda-ks.cfg  file_management_system  mj_dir  mj_file
[root@localhost ~]# cat data.txt
cat: data.txt: No such file or directory
[root@localhost ~]# touch mj_data.txt
[root@localhost ~]# rm mj_data.txt
rm: remove regular empty file 'mj_data.txt'? yes
[root@localhost ~]#
```

## 7. File Permissions Commands

**chmod:** Changes the permissions of a file or directory.

Command: chmod 755 filename.txt

```
Linux centos [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help

[root@localhost ~]# mkdir file_management_dir
[root@localhost ~]# ls
anaconda-ks.cfg  file_management_dir  file_management_system  mj_dir
[root@localhost ~]# rmdir file_management_dir
[root@localhost ~]# ls
anaconda-ks.cfg  file_management_system  mj_dir
[root@localhost ~]# touch mj_file
[root@localhost ~]# ls
anaconda-ks.cfg  file_management_system  mj_dir  mj_file
[root@localhost ~]# cat data.txt
cat: data.txt: No such file or directory
[root@localhost ~]# touch mj_data.txt
[root@localhost ~]# rm mj_data.txt
rm: remove regular empty file 'mj_data.txt'? yes
[root@localhost ~]# chmod 755 mj_file.txt
chmod: cannot access 'mj_file.txt': No such file or directory
[root@localhost ~]# chmod mj_dir
chmod: missing operand after 'mj_dir'
Try 'chmod --help' for more information.
[root@localhost ~]# chmod 755 mj_dir
[root@localhost ~]# ls -l
total 4
-rw-r--r--. 1 root root 1281 Nov  4 16:43 anaconda-ks.cfg
drwxr-xr-x. 2 root root  29 Nov  4 18:49 file_management_system
drwxr-xr-x. 2 root root  55 Nov  4 19:00 mj_dir
-rw-r--r--. 1 root root   0 Nov  5 08:59 mj_file
[root@localhost ~]#
```

**chown:** Changes the owner of a file or directory.

Command: `chown username:groupname filename.txt`

```
Linux centos [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help

anaconda-ks.cfg  file_management_system  mj_dir
[root@localhost ~]# touch mj_file
[root@localhost ~]# ls
anaconda-ks.cfg  file_management_system  mj_dir  mj_file
[root@localhost ~]# cat data.txt
cat: data.txt: No such file or directory
[root@localhost ~]# touch mj_data.txt
[root@localhost ~]# rm mj_data.txt
rm: remove regular empty file 'mj_data.txt'? yes
[root@localhost ~]# chmod 755 mj_file.txt
chmod: cannot access 'mj_file.txt': No such file or directory
[root@localhost ~]# chmod mj_dir
chmod: missing operand after 'mj_dir'
Try 'chmod --help' for more information.
[root@localhost ~]# chmod 755 mj_dir
[root@localhost ~]# ls -l
total 4
-rw-r--r--. 1 root root 1281 Nov  4 16:43 anaconda-ks.cfg
drwxr-xr-x. 2 root root  29 Nov  4 18:49 file_management_system
drwxr-xr-x. 2 root root  55 Nov  4 19:00 mj_dir
-rw-r--r--. 1 root root   0 Nov  5 08:59 mj_file
[root@localhost ~]# adduser anjali
adduser: warning: the home directory already exists.
Not copying any file from skel directory into it.
Creating mailbox file: File exists
[root@localhost ~]# deluser anjali
-bash: deluser: command not found
[root@localhost ~]# useradd user_a
[root@localhost ~]# chown user_a mj_dir
[root@localhost ~]# ls -l
total 4
-rw-r--r--. 1 root  user_a 1281 Nov  4 16:43 anaconda-ks.cfg
drwxr-xr-x. 2 root  user_a  29 Nov  4 18:49 file_management_system
drwxr-xr-x. 2 user_a root  55 Nov  4 19:00 mj_dir
-rw-r--r--. 1 root  user_a   0 Nov  5 08:59 mj_file
[root@localhost ~]#
```

## 6. Conclusion

The File Management System project represents a practical and educational endeavor aimed at simplifying file operations within a Linux environment. By utilizing basic command-line interface (CLI) commands, this system effectively allows users to manage files and directories without the complexity of graphical user interfaces. The project addresses several key objectives and provides significant benefits to users, both in terms of functionality and learning opportunities.

### Challenges and Lessons Learned

During the development of this project, several challenges were encountered, such as:

- **Ensuring Command Accuracy:** Users must be careful with commands like `rm`, which can permanently delete files. This highlighted the importance of user education on command usage and potential consequences.
- **Testing for Edge Cases:** Identifying and testing edge cases, such as attempting to delete non-existent files or creating files with invalid names, was crucial for improving the robustness of the system.

These challenges provided valuable lessons in careful system design, user feedback integration, and the necessity of thorough testing to ensure reliability.

### Final Thoughts

In conclusion, the File Management System serves as an effective tool for users seeking to manage files within a Linux environment. By focusing on essential functionalities and user engagement, the project not only meets its immediate goals but also provides a platform for learning and further development. As users continue to explore the capabilities of Linux and command-line interfaces, the skills gained through this project will serve as a foundation for their future endeavors in technology and computing. The potential for further enhancements ensures that the system can evolve alongside user needs, keeping it relevant and beneficial in the ever-changing landscape of digital file management.

## 7. Future Work

Future enhancements could include:

- Adding error handling for invalid commands.
- Implementing a user authentication system for file access.
- Providing more advanced features such as moving or renaming files and searching for files by name or content.
- Developing a graphical user interface (GUI) version of the file management system.
